Company Portrait

The company was founded in Switzerland in 1992. Our aim was and still is to meet our customers' special wishes, when purchasing from us, through a flexible company structure.

Intensive and personal customer support plays a major part in our company's philosophy. The quality of our extensive support is guaranteed by the know-how of each of our employees. We can offer our customers spare parts that are hard to find outside our own range or small merchandise quantities at a fair price.

A transparent communication policy is the basis for personal contact with our customers. Moreover, with the wide spread use of media such as telephone, fax, internet, mail, edifact and courier services, important information reaches its goal quickly around the clock.

Our customers' wishes are as varied as our supplier relations are international. Proverbial globalization is not just a thing of the future for us, but is already a thing of the present.

Our direct and reliable customer service has no limited opening hours. We can serve you up to 90% from our own warehouse and in special cases we can serve you from back up warehouses on site. With shipping and direct collection of goods at airports or from suppliers, we can guarantee you a short response time even when time gets really tight.

Quality through conservation? Of course! For customers with large orders we organize a special service to save on packaging and waste bills. This service standard is certified according to ISO 9001 : 2008 / ISO 14001 : 2004.

So that our customers make their visions and dreams come true, we are expanding our highly efficient service daily. Our products, supplies and after sales service grow with our customers' demands.

Flexibility is our strength. We meet our customers' individual needs from our advisory service to our sales service up to our after sales service.

Come and meet us!
